Siemens S7 1500 (ISO TCP)

HMI Factory Setting:

Controller IP Address: 192.168.0.1

Controller Ethernet Port: 102 Controller Station Number: 2

Control Area / Status Area: DBW0 / DBW20

Applicable models: DOP-B / DOP-W / DOP-H / HMC series \ DOP-100

Connection

Standard Jumper Cable / Network Cable without jumper (Auto-detected by HMI)

- 1) PLC needs to enable DB memory (DBm.DBWn、DBm.DBDn、DBm.DBXn.b) before DB data can be read.
- 2) Timer reads only up to 3 digits. If a value input is more than 3 digits, the Timer will regards the highest 3 (decimal) and replace the rest by 0. For example, a value 12345 will be written as 12300 in PLC.
- Counter reads only up to 3 digits. If a value input is more than 3 digits, the Counter will regards the first 3 digits and leave out the rest. For example, a value 12345 will be written as 123 in PLC.
- 4) A connection of S7-1200 ISO TCP only supports three HMI at the same time.
- 5) Except register Tn and Cn, data type of register is Byte and its order is opposite to usual controller, for example:
 - 1 > IW3 is a word which combined from IB3 and IB4 High Byte of IW3 is IB3; Low Byte of IW3 is IB4.
 - 2 ID3 is Double Word which combined from IB3, IB4, IB5 and IB6, and its order from highest to lowest is IB3, IB4, IB5 and IB6.
 - And please be attentive to use these registers, because their Data type is different with Data Length, it will need more than one register for each access, for example:
 - 1 · AIW6 which Data Type is Byte and Data Length is 1 Word, when it used for one word Numeric Entry , it will occupy two addresses AIB6 and AIB7 ·

- 2 MD12 which Data Type is Byte and Data Length is Double Word, when it used for one word Numeric Entry, it will occupy four addresses MB12,MB13,MB14 and MB15; But data only stored in MB14 and MB15.
- 3、IW3 which Data Type is Byte and Data Length is 1 Word, when it used for double word Numeric Entry, it will occupy for addresses IB3,IB4,IB5 and IB6, order from highest to lowest byte is IB5,IB6,IB3 and IB4.
