

Digitized Automation for a Changing World

Delta Semiconductor Equipment Standard Communication and Control Application

DIASECS-GEM Runtime / Box

DIASECS-GEM is tailored to equipment vendors not familiar with SECS/GEM standards. It features quick set up, and requires zero programming skills.

Highly integrated, user-friendly interface, anomaly tracking

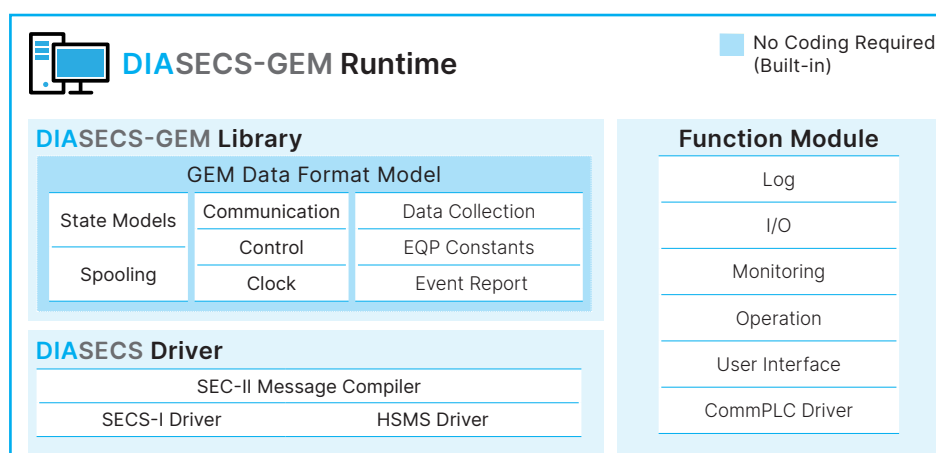

- Simple configuration with SECS/GEM, no programming needed
- Comprehensive functionality featuring bidirectional handshaking
- Provides built-in functional screen display without requiring additional development
- Built-in simulator for functional verification and stress testing
- Configuration tool establishes point data rapidly and automatically generates I/O mapping files, enabling more efficient device development for PLC engineers
